

## s-2-s Bag (Slide-to-Save) patented

**The first minutes count! Bring the injured person to a safe place!**

A security system developed by firemen for firemen and also for the nursing staff in buildings like hospitals, old peoples home, or for Everybody in places like high rise buildings.

s-2-s (slide to save)

Patients are slid to a safe place and don't have to be carried anymore.

The advantage of such a rescuing system is obvious:

Less effort and less human resources, quick and easy rescue (narrow staircases), easy to slide, only one hand has to be used, direct eye contact and better protection against smoke, hot fumes, heat and burning material. Rescue by one person possible (also by non firemen). Possibility to store additional equipments (device, life-saving equipments), little stress for the patient, rescue in the correct position (e.g. on the side).

The **s-2-s** is available in two models

Based on tests the members of the Swiss Fire Brigade Association agree that the s-2-s bag suits to difficult rescue operations and the rescue of persons.

*(Kommission technische Fragen Atemschutz, SFV)*

### - s-2-s fire; for fire brigades

The person to be rescued is protected by a hardwearing, temperature proof special fabric. The temperature proof of the tissue is at 300° C (peak: 500° C). The slide protection tissue prevents from damaging the person-protection lining and ensures the necessary gliding ability. For particularly rough floors and heavy wear the s-2-s is equipped with a replaceable patch. The inside lining protects the person from uneven floors, bumps and offers some comfort. The person is fixed with three belts or Velcro fasteners. With the help of several handles, even difficult passages can be handled.

### How to carry

Easy to carry (attached to the breathing apparatus):

The s-2-s bag is thanks to its measurements (slightly larger than a breathing apparatus) and its low weight, easy to carry. Therefore it can be carried along as easily as a life-saving equipment.

Measurements: Diameter = about 18 cm (7,1"), length = about 72 cm (28,3"), weight about 5.6 kg (12,3 pounds).

### - s-2-s public; for buildings (Hospitals, Residential Homes, High Rise Buildings, Hotels etc.

This version has a thicker lining and is usually not rolled up. The s-2-s bag can be hung up in a blue cover in an easily accessible place, e.g. near the fire fighting equipments.

### Easy to use

**Narrow staircases are no more obstacles.**

The s-2-s bag absorbs bumps, so that slid up or down stairs feels like a pleasant massage. Test it yourself!

### s-2-s customer; customer adjustment

Newly developed materials enable a variety of uses, even for special uses.
